#### PREREQUISITES RELATING TO KNOWLEDGE, SKILLS AND OTHER COMPETENCES

1. The student has basic knowledge of calculus and algebra.

#### SUBJECT OBJECTIVES

- C1 Student is understanding the concepts and methods of mathematical programming.
- C2 He knows and understands the formulation of the linear and quadratic programming.
- C3 He has knowledge of the theoretical background of mathematical programming.
- C4 He knows the computer methods of mathematical programming.
- He is able to apply the acquired knowledge to create and analyze mathematical models to solve theoretical and practical study in various fields of science and technology.

# SUBJECT EDUCATIONAL EFFECTS

The scope of the student's knowledge:

PEK\_W01: Student knows the formulation of mathematical programming problems.

- PEK\_W02: He has a basic knowledge about the usage and importance of mathematical programming methods.
- PEK\_W03: He knows the limitations of analytical methods and the possibility of numerical analysis of optimization problems.

The scope of the student's skills:

PEK\_U01. Student is able to formulate mathematical programming problem in a

convenient form for analysis.

PEK\_U02. He can use the appropriate algorithm to solve tasks in the mathematical programming.

PEK\_U03. He can apply optimization methods, and analytical methods or numerical analysis, in order to solve practical problems.

The scope of the student's social skills:

PEK\_K01 The student is able to find and use the recommended literature course and independently acquire knowledge

PEK\_K02 The student is able to use the basic tools for the analysis of mathematical models PEK\_K03 The student understands the need for systematic and independent work on mastery of course material.

| Course content |   |            |  |  |
|----------------|---|------------|--|--|
|                | Form of activities - lectures   | Hours load |  |  |
| Wy1            | Introduction to mathematical programming. Optimization without constraints. Global and local extremes. Optimality conditions.   | 2          |  |  |
| Wy2            | Gradient methods. Steepest descent method. Newton's method and its variants. Analysis of convergence.   | 6          |  |  |
| Wy3            | Linear programming. Geometric interpretation. Simplex algorithm.  | 4          |  |  |
| Wy4            | Dual problem. Duality theory for linear programming. Sensitivity analysis.  | 2          |  |  |
| Wy5            | Integer programming. Linear programming relaxation. Branch and bound method.  | 2          |  |  |
| Wyб            | The theory of Lagrange multipliers. The necessary and sufficient conditions for extreme for constraints in the equality form. Lagrange multipliers in sensitivity analysis. | 4          |  |  |
| Wy7            | Constraints in the form of inequality. Optimality conditions of Karush-Kuhn-Tucker.   | 2          |  |  |
| Wy8            | Quadratic programming. Wolfe's algorithm.   | 2          |  |  |
| Wy9            | Elements of convex analysis. Projection theorem. Supporting hyperplane theorem. Separating hyperplane theorem.  | 2          |  |  |
| Wy10           | Optimization on a convex set. Frank-Wolfe's method. Gradient projection method.   | 2          |  |  |
| Wy11           | Convex programming. Duality for convex programming. Subgradient. Subgradient methods.   | 2          |  |  |
|                | Total load (in hours)   | 30         |  |  |

|      | Form of activities: classes, practice                                     | Number of<br>hours |
|------|---|--------------------|
| Ćw1. | Necessary and sufficient optimality conditions.                           | 2                  |
| Ćw2. | Properties of convex functions and convex sets.                           | 2                  |
| Ćw3. | Illustration of gradient methods.   | 4                  |
| Ćw4. | Simplex method. Practical applications of linear programming. Sensitivity | 8                  |

|      | analysis.  |    |
|------|--|----|
| Ćw5. | Applications of Lagrange multiplier theory in practical optimization | 6  |
|      | problems.  |    |
| Ćw6. | Quadratic programming problems.                                      | 4  |
| Ćw7. | Applications of convex analysis in solving optimization problems.    | 2  |
| Ćw8. | Test.  | 2  |
|      | Total hours  | 30 |

## **TOOLS FOR TEACHING**

1 Lecture - traditional method.

2 Exercise and accounting problems - the traditional method.

3 Consultation.

4 Student's own work - preparing to exercise and test.

## OCENA OSIĄGNIĘCIA EFEKTÓW KSZTAŁCENIA
